# CHALLENGES IN TRAINING

- Regarding Emergency Management: how do you plan spill response vs. an all hazards emergency response? How do we make these responses more consistent?
- Regarding Source Reduction: how do we bridge the worlds of Safety, Occupational Health, and the Source Reduction worlds to consider different targets and terminology?
- In today's political climate, many pollution prevention practitioners have started to look to resiliency planning as a more readily fundable field of focus. How can P2 professionals best learn from and partner with emergency planning professionals and techniques?
